

THE NEW **ATELIER SERIES**

**CANTON**

MORE FLEXIBILITY. MORE FREEDOM.

The models in the new Atelier series combine design, flexibility and excellent sound quality. With their **wide range of applications** and flat design, they blend discreetly into any living environment. Yet behind the minimalist silhouette lies real hi-fi power. The models in the new Atelier series have been consistently optimised through intensive development work: The proven aluminium and aluminium-manganese drivers were finished with a black coating in an additional production step. The resulting **ATB midrange and bass drivers** (aluminium titanium black) and **AB tweeters** (aluminium black) set striking accents both acoustically and visually. The new tweeter grille with integrated lens now consists of a single piece, which avoids tolerances in production and ensures greater accuracy. The result: a clear, dynamic and balanced sound – even at high levels.

The new Atelier series offers a wide range of models for **both vertical and horizontal (centre) mounting** - for installation on the wall (OnWall) or in a wall (InWall). The InWall models **include an installation kit** and are fitted with a magnetic fabric cover that extends beyond the housing. The OnWall models come with an **integrated wall bracket** and smaller magnetic fabric covers that are flush with the cabinet.

- ATB mid-woofer system
  - AB tweeter system
  - Flat enclosure design
  - Installation depth: < 10 cm
- Integrated wall bracket for OnWall installation
  - Mounting kit for installation in walls included (for InWall models)
- Standardised holes for VESA brackets (100 × 100 mm)\*
  - Sound-neutral frameless fabric covers, magnetically adhesive

◀ Atelier OnWall 11

## LIKE A PICTURE ON THE WALL

The wall brackets integrated into the cabinet are integrated into both the OnWall and InWall models and **make mounting on the wall particularly easy** (Fig. 1). For a perfect sound connection, the high-quality connection terminal is perfectly integrated into the housing using a 'hidden connection' allowing **close-to-wall mounting** (Fig. 1). A new feature is the VESA mounting option: with a **VESA mount of your choice**, you have complete freedom: Tilt, swivel, align – individually tailored to your listening position (Fig. 2). Alternatively, the InWall models in the series can be easily integrated into the wall using the **included installation kit** (Fig. 3). They then stand out just a few centimetres from the wall – for an almost invisible sound experience, with only the frameless fabric cover remaining visible. For those who prefer it without a cover, the **silk matt surfaces**, purist fronts and **elegant black membranes** create a timeless and modern look.
