Modern look of the new Vento

We've redesigned the look and technology of our Vento premium speaker series. Thanks to the modern design, with discreetly curved side panels, rounded cabinet edges and high-quality surfaces with a perfect finish, the new Vento speakers have a very self-assured appearance. The harmoniously proportioned premium speakers offer a perfect balance between timeless elegance and powerful performance. This allows the Vento models to be used universally - they are an enrichment for the most diverse living spaces. The Vento 80 is a slim 3-way bass reflex floorstanding speaker with harmonious proportions and an elegant, refined appearance. With their excellent technical features and superior sound development, audiophiles and fans of high dynamics alike will be delighted. The Vento 80 convince with the incomparably good Canton sound, highest durability and finest workmanship - a feast for the senses.

Titanium Graphite - high-quality technology

The Vento 80 is equipped with newly developed drivers with titanium graphite membranes in the midrange and bass range. Due to their matt shimmering titanium graphite diaphragms, the speaker drivers appear discreetly elegant and give the Vento speakers a noble appearance. They nestle seamlessly into the high-gloss lacquered baffles without any visible screw connections. At the same time, our double cone technology with its continuous diaphragm surface and the wave surrounds capable of particularly large excursions ensure impressive dynamic capabilities. The new titanium graphite drivers are very stiff and have excellent damping properties. In addition, the new drivers work as perfect piston transducers and thus offer ideal conditions for reproducing acoustic signals one-to-one, without losses. The result: the speakers sound dynamic and relaxed in any music style.

Noble enclosures for the best sound

The new cabinets not only look very high quality, they also have to meet our high technical requirements. The revised design ensures that more interior volume is available to tune the speakers with more bandwidth in the low frequency range. As a result, the new Vento speakers perform with even more contour and cleanliness. In addition, the sharp-edged cabinet radii, the modified base and the new basic shape ensure less sound interference from the cabinet itself. The redesigned plinth makes the Vento 80 appear to "float", giving the floorstanding speaker an understated yet elegant appearance. In addition, the plinth design ensures that the

speaker is particularly uncritical in its placement. Thanks to the different cabinet finishes available, the modernly designed and timelessly elegant Vento loudspeaker models feel at home in many interior design styles. At the same time, the cabinets of the new Ventos meet the highest standards of workmanship and touch quality. The premium speakers are available in white and black "high gloss" lacquers.

Eyes on the details

The speaker terminals in the new Ventos have been redesigned both visually and technically to ensure maximum conductivity. The solid screw terminals, designed in single or bi-wiring construction depending on the Vento model, hold cable cross-sections of up to 10 mm² and offer the possibility of accommodating speaker cables with banana plugs or fork bridges. The new terminals have a special high-quality and conductive material, with new terminals and a finer thread. As a result, we achieve reference-worthy contacting in the Vento series as well for perfect sound development and long-term stable contact to connected amplifiers. The innovations of the Vento series continue with the high-quality fabric covers. If necessary, they conceal a direct view of the technology and hold onto the baffles with powerful magnets. The straight top and discreetly curved bottom panels in black provide an unobtrusive, calm exterior.

Well selected technology

Apart from their elegant appearance, our Vento 80 loudspeakers impress with their high technical quality. They are constructed from multi-layer laminate in many individual steps and are braced several times on the inside, resulting in very solid and low-resonance cabinets: ideal for superior sound development. In addition, the sophisticated damping of the Vento 80 cabinets and selected crossover components of the highest quality ensure that the sound of the floorstanding speakers is optimised. Two 174 mm woofers in each of the elegant bass-reflex cabinets provide powerful, deep bass. Thanks to the double cone cones made of titanium graphite and the wave surround technology, the speakers remain precise and sharp in their contours even at high

CANTON

volumes. The ideal complement to the woofer duo is the 174 mm titanium graphite midrange driver with large cone area and triple folded wave surround, as well as the high-sounding 25 mm ceramic tweeter dome.

Type	Floorstanding Speaker
Engineering Principle	3-way bass reflex
Nom. /Music power handling	140 / 250 watts
Frequency response	20...40.000 Hz
Crossover frequency	170 / 3.000 Hz
Woofers	2 x 174 mm (6,8"), Titanium-graphite (Wave surround)
Midrange	1 x 174 mm (6,8"), Titanium-graphite (Wave surround)
Tweeter	1 x 25 mm (1"), Ceramic
Warranty	5 Jahre
Nominal Impedance	4...8 ohms
Dimensions (WxHxD)	26 x 103 x 34 cm (10.2" x 40.6" x 13.8")
Carton Content	Vento 80 Fabric grill (black) Manual
